NETWORKS & SECURITY

HIGH PERFORMANCE · ROBUST NETWORKS · SCALABLE

Networks contain and provide access to a company's information and assets, allow employees and partners to efficiently share and communicate, and ensure the security of valuable data.

WHAT'S THE
PROBLEM

When onsite networks managed by in-house IT resources fail, the reality is that more time and money is spent restoring peak performance. Downtime eats productivity. Productivity equals profit.

- Decentralized software and management
- High infrastructure costs
- Inefficient software and application licensing
- Network downtime
- Process inefficiencies
- Security risks
- Slow network speed
- Support limitations

WHAT YOU
NEED

It's not just the products and recommendations we make, but how we deliver that sets us apart and above from the average Managed Service provider.

- Immediate, automated remediation
- Increase productivity
- Latest products and updates
- Reduce downtime
- Remove upgrade and replacement costs
- Secure data and communication
- Streamlined or reduced costs

WHAT WE
DO

We take networks seriously. As the core technology infrastructure of most businesses today, networks must be planned with an intimate understanding of the company and its requirements.

- Analytics
- Consultation
- Network and deployment plan
- Onsite direction and leadership
- Onsite/Offsite support with SLAs
- Round-the-clock remote support

WE PROVIDE
- Customized service solutions
- Certified engineers for all platforms
- 24/7 break/fix support
- Reliable Service Level Agreements
- Flexible monthly or use-based billing
- Enterprise-level security
- Integrated virtual server, network and storage
